

RICARDO MARTINEZ BANDA

Backend Developer | Java · Spring Boot · AWS · Microservices · Docker

3012082248 | rickmartinezbanda@gmail.com | Medellín, Colombia

[linkedin.com/in/ricardo-martinez-banda](https://www.linkedin.com/in/ricardo-martinez-banda) | github.com/ricardomb-tech | ricardomartinez.online

PROFESSIONAL SUMMARY

Backend developer with hands-on experience in Java 17+ and Spring Boot 3.x, building production-grade RESTful APIs and services. Proven track record across enterprise banking systems and consumer-facing web platforms, implementing authentication with Spring Security and JWT, relational database integration, and Docker-based deployments on AWS. Strong command of layered architecture, design patterns, and SOLID principles, with additional experience leading a full-stack IoT project end to end. Available for remote work across LATAM.

TECHNICAL SKILLS

Backend: Java 21, Spring Boot 3.x, Spring Security, JWT, Spring Data JPA, Hibernate, REST APIs, WebSocket/STOMP, WebRTC, Python

Cloud & DevOps: AWS (EC2, RDS, ECS, CloudWatch), Docker, Docker Compose, Terraform, GitHub Actions, CI/CD, VPS Hostinger

Databases: PostgreSQL, TimescaleDB, MySQL, Oracle Database, Redis, MongoDB, Supabase

Frontend: Angular 20, TypeScript, Flutter, Next.js 15

Architecture: Microservices, DDD, Hexagonal Architecture, Event-Driven, MVC, REST

Testing: JUnit 5, Mockito, unit and integration testing

Methodologies: Scrum, Clean Code, SOLID, Technical Leadership, Code Review

Tools: IntelliJ IDEA, Postman, Swagger/OpenAPI, Docker Desktop, Terraform CLI, DBeaver, Jira, Git, Claude Code, BMAD Method

PROFESSIONAL EXPERIENCE

JDS The Skill Game | Backend DeveloperJul 2024 – Dec 2025

Yopal, Colombia

- Built RESTful APIs with Spring Boot 3.x for a live production gaming platform, handling real-time communication via WebSocket/STOMP.
- Implemented authentication and authorization with Spring Security and JWT, including role-based access control (RBAC).
- Worked with WebRTC to power real-time communication features within the platform.
- Managed MySQL and PostgreSQL databases on AWS RDS; deployed with Docker Compose on VPS.
- Took part in Scrum ceremonies, task management in Jira, and team code reviews.

Stack: Java 21 | Spring Boot 3.x | Spring Security | JWT | JPA | WebSocket | WebRTC | PostgreSQL | MySQL | AWS RDS | Docker | Scrum

Accenture — Client: Davivienda | Backend Java DeveloperJul 2023 – Jan 2024

Colombia (Remote)

- Developed backend modules in Java and Spring Boot for Davivienda's core banking system, working with Oracle Database in an enterprise environment.
- Implemented PDF and Excel report generation consuming internal REST APIs of the banking system.
- Integrated views with JSF/PrimeFaces applying Clean Code and SOLID principles.
- Participated in requirements gathering with the functional team and use case documentation.

Stack: Java | Spring Boot | JSF | PrimeFaces | Oracle Database | REST APIs | Clean Code | SOLID

GPS Noe — Freelance IoT Project | Full Stack DeveloperMay 2026 – Present

Colombia

- Led end-to-end architecture and development of a GPS tracking system for motorcycles, integrating ESP32 hardware, a Spring Boot backend, a Flutter mobile app, and an Angular 20 web dashboard.

- Designed an event-driven pipeline: IoT device → REST API → real-time geolocation visualization, using TimescaleDB for time-series data.

Stack: Spring Boot | Angular 20 | Flutter | ESP32 | TimescaleDB | PostgreSQL | Docker | REST APIs

Fenix BG SAS | Systems Analyst — University Internship Jul 2024 – Dec 2024

Colombia

- Developed PHP/Laravel modules for an internal enterprise management system, improving administrative reporting workflows.
- Implemented PDF report generation with Blade templates and gathered requirements directly with end users.

Stack: PHP | Laravel | MySQL | Blade Templates

FEATURED PROJECTS

GPS Noe — IoT GPS Tracking System

- Problem: Motorcycle fleet operators lacked an affordable real-time tracking solution with mobile access.
- Solution: Full-stack IoT system with ESP32 hardware + Spring Boot REST API + Flutter app + Angular 20 dashboard.
- Result: End-to-end latency under 2s; TimescaleDB handles time-series telemetry at scale.

Stack: Java 21 | Spring Boot 3.x | Angular 20 | Flutter | ESP32 | TimescaleDB | Docker | AWS

Margen — Micro-SaaS for Restaurant Cost Management (LATAM)

- Problem: Independent restaurants across LATAM lack an affordable tool to track per-dish cost margins in real time.
- Solution: Micro-SaaS with a Spring Boot backend, a cost-calculation engine, and a multi-tenant dashboard.
- Goal: 200+ pilot restaurants in Colombia.

Stack: Spring Boot | PostgreSQL | Redis | Docker | AWS ECS | Angular 20

SURQO — Agricultural IoT/AI Platform <https://www.surqo.online>

- Problem: Small-scale farmers lack access to real-time sensor data and AI-driven agricultural recommendations.
- Solution: IoT data pipeline built in Python, an AI inference layer, and a Next.js dashboard for field monitoring.

Stack: Python | Next.js | PostgreSQL | TimescaleDB | AWS | Docker

Task Manager API <https://github.com/ricardomb-tech/mylife-hub.git>

- REST API with JWT authentication, ADMIN/MEMBER role control, pagination, filters, and Swagger documentation. Deployed on Render with Docker Compose.

Stack: Java 21 | Spring Boot 3 | Spring Security | PostgreSQL | JPA | JUnit 5 | Docker | Swagger/OpenAPI

EDUCATION

Universidad del Sinú Elías Bechara Zainum | Systems Engineering — Graduated Aug 2025

Montería, Córdoba, Colombia

SENA — Servicio Nacional de Aprendizaje | Software Analysis & Development Technologist — Graduated Feb 2024

Colombia

Available for remote roles across LATAM — Backend Developer / Java Developer
